

May 15, 2012 FOR IMMEDIATE RELEASE

Chicago - *Becker's ASC Review* recently released the "[150 Pain Management Physicians To Know](#)" and named James A. Mirazita, M.D. to the list. Members of the list were selected for their positions held at top healthcare institutions, affiliation with professional organizations, and contributions to the field of pain management.

Dr. Mirazita is Chief Medical Officer of Pain Solutions and board-certified in both anesthesiology and pain management. He also serves as Vice President of the New Hampshire Society of Interventional Pain Physicians and is a Fellow of Interventional Pain Practice and member of the World Institute of Pain. He is a member and active board examiner of the American Board of Interventional Pain Physicians. Previously, Dr. Mirazita served as Medical Director of Anesthesia Services at The First Fighter Wing Hospital at Langley Air Force Base in Virginia. Dr. Mirazita earned his medical degree from Ohio State University College of Medicine and completed his residency in anesthesiology at Wilford Hall U.S. Air Force Medical Center in San Antonio. His additional training includes a fellowship in pain management at Harvard Medical School and Beth Israel Medical Center in Boston.

Dr. Mirazita's pain management practice is dedicated to helping patients regain their sense of physical and emotional well being by treating the whole patient, rather than an isolated pain problem. In addition to their state-of-the-art facility at 280 Main Street in Nashua, Pain Solutions operates clinics in Bedford and Concord, as well as operating as the Pain Department at LRGHealthcare with locations in Gilford and Franklin.

The list was created as a result of extensive research and recommendations from around the country. Physicians do not pay and cannot pay to be selected for this list.

*Becker's ASC Review* is a Chicago-based publication focusing business and legal issues and trends facing ambulatory surgery centers and the healthcare industry at large. The primary contributors and audience for the publication are surgery center administrators, physicians, and industry experts.
